

7,200 annual daylight simulations

Room width and depth · window height and sill orientation · window-to-floor ratio 1/8-1/5 glazing VT 0.64-0.76 · Warsaw and Berlin

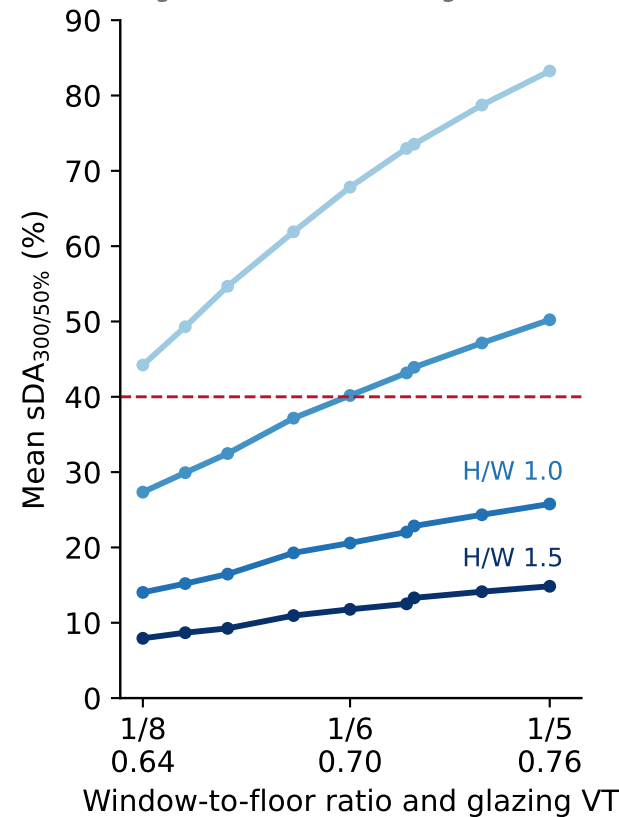

0 of 3,240 obstructed rooms reach 40% sDA

all comply with the 1/8 ratio

No tested ratio reaches 40% at H/W ≥ 1.0

larger windows, clearer glass

The 1/8 window-to-floor ratio regulates room size.

0.4%

of daylight variance is explained by room width, depth and window height.

98%

is explained by street geometry and orientation, which the ratio does not contain.
